Hands up — who uses AI to study?

Who would love an AI that knows exactly what the professor expects?

THE PROBLEM

Universities invest in AI. Nevertheless, students mostly use commercial tools instead.

- Generic AI (ChatGPT, Claude) has no idea what your professor actually taught
- Uni AI tools feel disconnected from course content → adoption stays low
- AI gives ready-made answers — it replaces thinking instead of training it

We need course-aware AI that amplifies human thinking.

OUR SOLUTION

Course CompAInion

An AI tutor grounded in your course material — transparent, responsible, course-aware.

GROUNDED ANSWERS

Answers only from prof-uploaded material. Every reply cites document & page. Out-of-scope? AI says so.

THINK-FIRST MODE

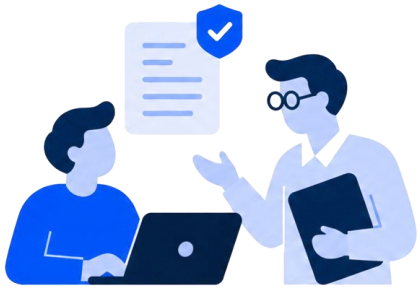

Student submits their hypothesis first. AI compares, highlights gaps — never gives away the answer.

PROF DASHBOARD

Anonymised clusters of student questions. Professors see exactly where understanding breaks down.

How does it work?

Let’s have a look on our prototype ☺
